SureFast Selector Chart

Fixings for mechanically fixed membrane & insulation

The SureFast fasteners have been designed to fix to various different substrates. Against each fastener we have given the build-up figures for each fixing application that the fastener can be used for. These build-up figures take into account the following recommended fastener penetrations when fixing to deck substrates:

Application	Penetration / Embedment
Steel decking	15mm through underside
Plywood decking	18mm minimum thickness 12mm through underside
Timber decking (not included in table below)	25mm minimum thickness 12mm through underside
Timber joists (not included in table below)	35mm embedment
Structural concrete	25mm embedment
